SafeCare, real-time staff deployment based on patient demand for safer and more efficient staffing levels.

SafeCare dynamically brings information on the actual staff levels together with the numbers and needs of patients. It provides a real-time shift-by-shift view of required versus actual staffing across an organisation making it easier to be responsive to changes in demand or staff availability.

Now selected by over 100 NHS and Independent sector health and care organisations, SafeCare is empowering site managers, matrons, ward managers and nurses. It is accessible on desktop computers, tablets and smart phones allowing clinical and operational teams to quickly:

- Record a census of patient numbers, acuity & dependency – typically three times a day
- Track attendance and sickness of those staff
- See the staffing status of all wards, services and locations in a single view
- Redeploy staff safely with full visibility of skills and impact elsewhere, helping to avoid unnecessary agency use
- View staffing status across many dimensions including hours short/excess, missing skills, missing patient census
- Request bank or agency cover if needed
- See all staff rostered on a shift, including their skills
- Quickly track 'Red Flags' as they occur as required by the first safe staffing NICE guideline
